

Icons of Evolution: Science or Myth?

Why Much of What We Teach About Evolution Is Wrong
by Jonathan Wells (338 pages)

Easy-to-read and best book we have found on the subject. Jonathan Wells, who holds a Ph.D. in molecular and cell biology, exposes the false and misleading examples Darwinists put forth as proof of evolution. These exaggerated claims and deceptions persist in standard textbook discussions in spite of contrary evidence. These are a few of several “warning labels” the author proposes for biology textbooks: “Darwin’s tree of life does not fit the fossil record of the Cambrian explosion, and molecular evidence does not support a simple branching-tree pattern.” “The Miller-Urey experiment probably did not simulate the Earth’s early atmosphere; it does not demonstrate how life’s building-blocks originated.” “Theories about human origins are subjective and controversial, and they rest on little evidence; all drawings of ‘ancestors’ are hypothetical.”
